Summary

Result-driven Backend Engineer with a solid foundation in Golang and a background in Software QA. Over 9 years of progressive experience in the tech industry, including leading QA initiatives and transitioning into backend development. Proven ability to build and maintain scalable, resilient backend systems using modern technologies such as Redis, PostgreSQL, Kubernetes, and NATS. Committed to life-time learning and building strong relationship with coworkers to create a shiny product that facilitates a real-world problem.

Technical Skills

Programming Languages: Golang, Python

Databases: PostgreSQL, MySQL, Redis, TimescaleDB

Infrastructure & DevOps: Kubernetes, Helm, ArgoCD, Grafana, PromQL, ELK, Jaeger, OpenTelemetry

Messaging: NATS (consumer development & cluster management)

Testing: K6 (load testing), Manual & Automated Testing

Version Control & CI/CD: Git, GitLab CI/CD

Experience

Backend Software Engineer June 2022 – May 2025
Snapp *Tehran, Iran*

- Developed and maintained critical backend systems including Drivers Incentive Program, Loyalty Program, Scoring and Badging System, and Performance Report Generator supporting over 5M daily rides.
- Built services with a test-driven approach, ensuring high unit test coverage using Go's testing package and Testify for assertions and mocks.
- Built and maintained Helm charts for application deployment; synchronized environments using ArgoCD.
- Integrated time-series data storage with TimescaleDB for efficient performance tracking.
- Visualized key performance metrics using Grafana and PromQL; integrated tracing with Jaeger and OpenTelemetry.
- Designed scalable Redis caching layers, handling over 20K RPM with $<$ 50ms latency in 95% of requests.
- Led load testing using K6 Operator to ensure system resiliency under production traffic patterns.

Senior Software QA Engineer Mar 2021 – Jun 2022
Snapp *Tehran, Iran*

- Conducted manual feature and regression testing plans for driver applications.
- Designed test strategies, reviewed QA documentation, and mentored junior QA engineers.
- Developed Python scripts to automate API and backend testing workflows.
- Built and executed load testing scenarios using K6.
- Collaborated with cross-functional teams to ensure release quality and identify defects early.

Software QA Engineer Jul 2019 – Mar 2021
Snapp *Tehran, Iran*

- Performed manual feature and regression testing for driver applications.
- Designed sophisticated test case scenarios to cover main workflows and tricky edge cases.

Software QA Engineer Jan 2017 – Jun 2019
Karestan Javan *Tehran, Iran*

- Worked on a large-scale insurance software implementation with a Japanese consulting firm.

• Performed thorough manual testing of business logic, premium calculations, and configuration rules.

Part-time Researcher Jun 2014 – Dec 2016
Amirkabir University of Technology Research Center *Tehran, Iran*

• Contributed to Industrial Engineering research and organizational performance improvement projects.

• Conducted company restructuring analysis and identified operational efficiency opportunities.

Education

Amirkabir University of Technology Tehran, Iran
M.Sc. in Industral Engineering, Financial Engineering *2015 – 2017*

• Awarded Exceptional Students Scholarship (Direct Admission without Entrance Exam).

Amirkabir University of Technology Tehran, Iran
B.Sc. in Industral Engineering *2011 – 2015*

Languages

English: Fluent (Speaking and Writing)

Persian: Native
